DETAILED ACTION

Allowable Subject Matter

1. Claims 24, 26-30 and 36-39 are allowed. The following is the examiner's reasons for allowance: Claim 24 is directed to an image processing method performed by an image supply device generating a first script configured to resume the interrupted print operation; and a second script specifying one of the objects which was first printed by the image output device in the single page layout of the interrupted print operation; transmitting the second information item from the image supply device to the image output device; and resuming the interrupted print operation from the one of the objects specified by the second script, wherein at least a part of the first information item and at least a part of the second information item are described by a markup language, and wherein the objects are independent image files. The most pertinent prior arts are Ogiwara et al. (US Patent Number 7,161,701 B2) and Yoshida et al. (US Patent Number 7,154,619 A1). The prior arts made of record does not disclose a second script specifying one of the objects which was first printed by the image output device in the single page layout of the interrupted print operation and resuming the interrupted print operation from the one of the objects specified by the second script, wherein at least a part of the first information item and at least a part of the second information item are described by a markup language, and wherein the objects are independent image files. The Examiner finds no reason or motivation to combine the above references in an obviousness rejection thus placing the application in condition for allowance.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
